**Tools Required**

- (1) Pneumatic Driver Gun
- (1) Robertson Bit
- (1) Hex Bit

**Hardware Included**

- (16) 1/4-20 x 3/4” Machine Screws
- (4) 1/4-20 x 1 1/4” Flat Socket Screws
- (4) Glides

---

1. Place the slab top upside down on a well-padded flat surface.

2. Place the metal leg inserts as shown (note: the wider insert has a cutout to allow for the power cord).

3. Use eight 1/4-20 x 3/4” machine screws to secure the inserts to the top. Hand tighten the screws first to allow some play for the screws to properly line up. Secure the screws with a screwdriver once all the screws are aligned.

4. Place the table on its side and feed the power cord through the table top opening.

5. Once the cord is through, pull the cord from the bottom end while continuing to feed the power through the top. Ensure that some slack is left in the cord where the power unit is inserted.

6. Insert the power unit into the cutout. You can hold it in place with masking tape as it is loose at this point and will fall out when turning the table back into the upright position.
Before assembling the first, wider table leg, note the detail, as the channeled end goes against the underside of the table.

Warning
Ensure that the channeled end of the slab table leg goes against the underside of the table, not the ground, as shown in step 7.

Take out the slack in the cord as the leg is lowered into place.

Use two 1/4-20 x 11/4" flat socket screws (one on each end) to secure the plate. The plate should sit in the pocket, and not sit proud of the leg bottom. If it is sitting proud the leg has been installed upside-down.

Assemble the leg glide after the flat socket screw and leave enough thread, as this will assist in protecting the table leg edge when turning the table back on its legs.

Repeat leg assembly steps (without the power cord) for the second table leg. The plate should sit in the pocket, and not sit proud of the leg bottom. If it is sitting proud the leg has been installed upside-down.
Making sure there is sufficient padding in place to avoid damages, turn the table onto its legs.

Move the table into place and adjust the glides to provide a level surface.

Clips are included to secure the power unit and cord into place. Push the clips into the power unit and use a clip and adhesive to secure the cord. Firmly press the power unit into place.

To access the power ports simply press and release.

**Power**

Three electrical outlets rated 15A/125VAC and two USB-A connections for USB powered devices.
